

Ever worked with, or want to start working with Media Architecture technology?

We are offering an exclusive workshop opportunity. A chance to understand the processes and technologies required, to deliver a successful Media Architectural project. Grab this opportunity to be creative, develop your skills and have peace of mind when working in this fairly new growing genre.

Martin Professional, one of the industry leaders in dynamic light, have over several years developed a diverse, flexible and creative family of video products, and infrastructure technology for the Architectural and Entertainment markets.

With a large portfolio of projects, varying in size, around the globe, Martin Professional has gained a wealth of knowledge, that can add value to the design and delivery of these interesting projects.

We want to share this with you!

Wouter Verlinden, concept, design and product manager of all LED video products at Martin by Harman, will be conducting a workshop on Media Architecture technology. Media Architecture of today and how it works, and what does the future hold.

Wouter's workshop will cover the full process from concepts, planning, products, installation to service and maintenance. The main focus of the workshop will be on what is to be achieved, what to be aware of within the project process, and do's and don'ts throughout the entire project.

This is a workshop that will provide you with valuable skills that can translate across other product ranges.

Get inspired, creating your own unique designs using the technology at any scale and in any application – with a peace of mind when doing so.

22 January 09.00-12.30 CPH
5 February 09.00-12.30 STHLM
7 February 09.00-12.30 OSL

Location will be announced directly to participants later. Limited seats.
